

NET-ZERO EQUITY PORTFOLIO

Half the carbon, every year · The same returns as the market

Group BR Asset Management | North America + Europe | Value-weighted benchmark | 2014–2024 back-test

As a pension fund, you target a **net-zero emission goal**, while still owing your beneficiaries competitive long-term returns. With our newly developed strategy you can deliver both: keep your pensioners satisfied with steady long-term returns, while also reaching your carbon-neutrality commitments by holding the portfolio's carbon footprint at half the market's, every single year.

CARBON FOOTPRINT
every year, binding

10.2%

ANNUAL RETURN
vs. 10.6% benchmark

0.69

SHARPE RATIO
vs. 0.72 benchmark

Cumulative portfolio growth, 2014 - 2024

\$1 invested in 2014 grows to **\$2.85** in the benchmark and **\$2.71** in our portfolio, monthly returns are **99.7%** correlated.

Portfolio carbon footprint by year

Our portfolio sits exactly on the **50%-of-benchmark** target every year.

HOW THE STRATEGY WORKS

1. TRACK

Mirror the **value-weighted** market benchmark across North America & Europe as closely as possible.

2. HALVE

Trim the few heavy emitters (utilities, oil, cement) so carbon stays at 50% of the benchmark.

3. HOLD

Long-only, fully invested, broadly diversified at all times.

TRADE-OFFS WE MANAGE

Sector tilts — under-weight in utilities, oil, cement.

Past-data only — calculations use historical returns; future markets may differ.

Data quality — Scope 1+2 only, audited, refreshed annually.

Halve your equity carbon today · Keep it halved, year after year · Keep the returns you need
